Consider a discrete-time signal with period $N = 5$. Let the discrete-time Fourier series (DTFS) representation be $x[n] = \sum_{k=0}^4 a_k e^{\frac{jk2\pi n}{5}}$, where $a_0 = 1$, $a_1 = 3j$, $a_2 = 2j$, $a_3 = -2j$, $a_4 = -3j$. The value of the sum

$$\sum_{n=0}^4 x[n] \sin\left(\frac{4\pi n}{5}\right) \text{ is}$$

Solution:

$$\sum_{n=0}^4 x(n) \sin\left(\frac{4\pi n}{5}\right) = \sum_{n=0}^4 x[n] \left[\frac{e^{\frac{j4\pi n}{5}} - e^{-\frac{j4\pi n}{5}}}{2j} \right] \quad (1)$$

$$\sum_{n=0}^4 x(n) \sin\left(\frac{4\pi n}{5}\right) = \frac{1}{2j} \left[\sum_{n=0}^4 x[n] e^{\frac{j2\pi(2)n}{5}} - \sum_{n=0}^4 x[n] e^{-\frac{j2\pi(2)n}{5}} \right] \quad (2)$$

DFTS coefficient is given by,

$$a_k = \frac{1}{N} \sum_{n=0}^{N-1} x(n) e^{-\frac{j2\pi kn}{N}} \quad (3)$$

Given that time period of $x(n)$ is $N=5$ sec.

$$a_k = \frac{1}{5} \sum_{n=0}^4 x(n) e^{-\frac{j2\pi kn}{5}} \quad (4)$$

$$\sum_{n=0}^4 x(n) e^{-\frac{j2\pi kn}{5}} = 5a_k \quad (5)$$

Referencing from equation(5), equation(2) can be written as:

$$\sum_{n=0}^4 x(n) \sin\left(\frac{4\pi n}{5}\right) = \frac{1}{2j} [5a_{-2} - 5a_2] \quad (6)$$

From the property of discrete Fourier series.

$a_k = a_{k+N}$, where N is the time period.

So, equation(6) becomes,

$$\sum_{n=0}^4 x(n) \sin\left(\frac{4\pi n}{5}\right) = \frac{1}{2j} [5a_3 - 5a_2] \quad (7)$$

$$\sum_{n=0}^4 x(n) \sin\left(\frac{4\pi n}{5}\right) = -10 \quad (8)$$
